

Bridge Instructions

1. Make sure you have the latest version of the Mopeka app.
 2. Open the app.
-

3. Use the Login button to create a new account, or login to an existing account.

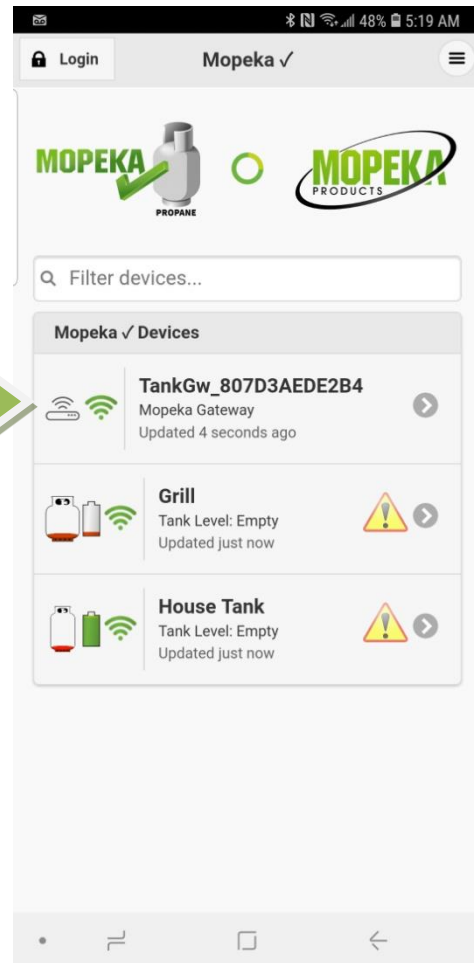

-
4. Plug in the Bridge. Power light will flash for a few seconds then will turn off.
-

5. Press the button on the Bridge, to make the Bridge visible to the app.
-

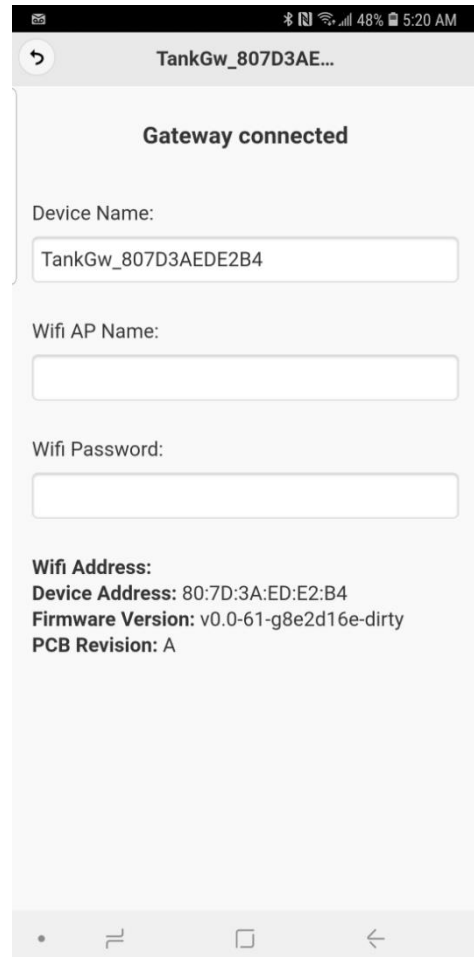

Bridge Instructions

6. You will then see the Bridge appear in the devices list.

7. Select the Bridge. After a few seconds you will see the Bridge/Wifi connection screen.

TankGw_807D3AE...

Gateway connected

Device Name:
TankGw_807D3AEDE2B4

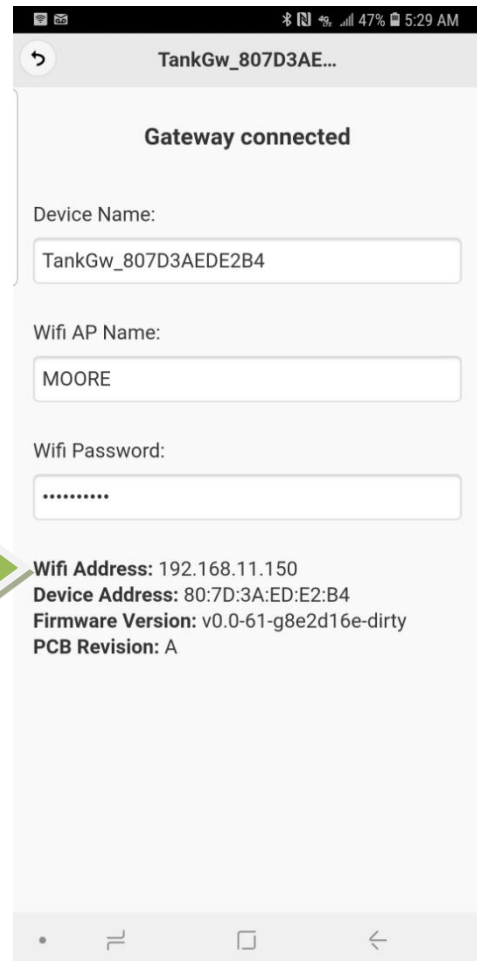

Wifi AP Name:

Wifi Password:

Wifi Address:
Device Address: 80:7D:3A:ED:E2:B4
Firmware Version: v0.0-61-g8e2d16e-dirty
PCB Revision: A

8. Type in the case sensitive name and password of your local wifi router.

- The Bridge will then connect to the router. Successful connection will be indicated by an IP address being shown in the 'Wifi Adress' field; and by a solid green light on the wifi symbol of the Bridge.

-
- The Bridge is now connected to the Mopeka cloud.

-
- Sensor data will automatically be updated at regular intervals to the cloud. When your phone/tablet are not within blue tooth range of the sensor, the app will retrieve the most recent tank level from the cloud.
-

For support, please email support@mopeka.com; or call 833-MOPEKA1.

Indicator lights on Bridge

	Power; will flash when first plugged in to indicate successful power connection.
	Sensor Communications; will flash yellow every time the Bridge sees communication from any sensors.
	Bluetooth; indicates successful bluetooth communication with the phone/smart device used to setup the Bridge.
	Cloud; indicates successful communication between Bridge and cloud.
	Wifi; indicates successful connection between Bridge and wifi modem/router.
